Overview of "COMWARE TO SPACE"

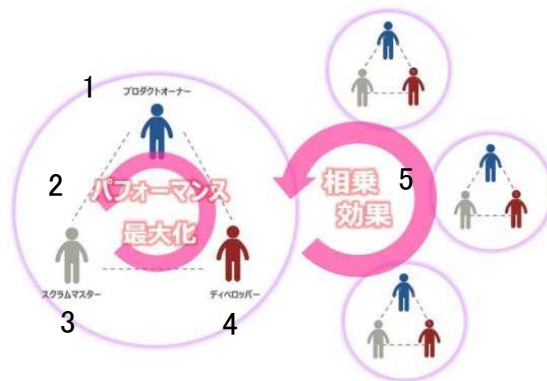

Date of opening: June 7, 2019

Location: Shinagawa Seaside South Tower, 4-12-1 Higashi Shinagawa, Shinagawa-ku, Tokyo

Logo mark:

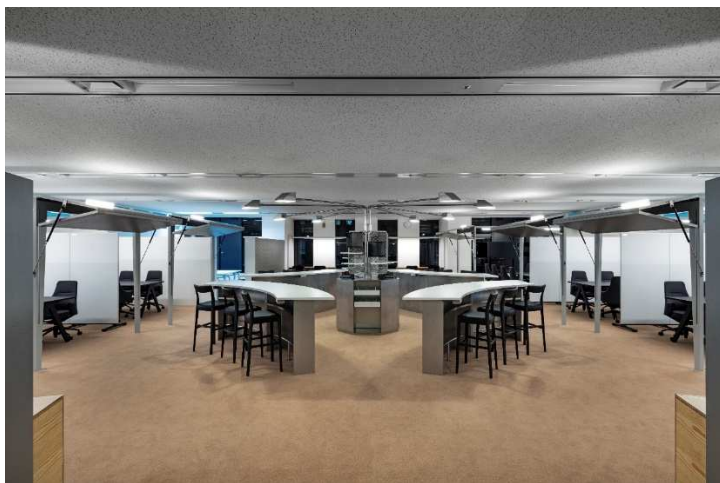

Feature: NTT COMWARE embarks on challenges to create a place "COMWARE TO SPACE", focused on the psychology and emotional side of effects as well as roles and behaviors of the "Scrum" teams to enable them to realize optimum performance. While NTT COMWARE understands that one of the keys to success is team building and communication through its experience in agile software development, the agile software development team members themselves spent a lot of time discussing what is the place to realize optimum results. NTT COMWARE also plans to design the zoning layout to be an "open community" effective in creating synergies between various Scrum teams, enabling them to co-exist in the same space, so that they share more ideas of knowledge or problem solving beyond the boundaries between teams.

1. Product owner
2. Optimum performance
3. SCRUM Master
4. Developer
5. Synergies

Furthermore, the location design incorporates various ideas or techniques based on past experience in system development, which was once conducted by separate locations or several different teams. The new place should encourage the team members to solve various problems in communication or team building such as location and scale. "COMWARE TO SPACE" will continue to improve thanks to the team members themselves who actually use the space aiming for further business value development. The place will also help the teams be more efficient and maximize their potential by enabling them to work together beyond their borders.
